

SIMPLE IS BETTER

4/19/19

LUCKY IDIOT

SIMPLE IS BETTER – ISSUE -16 – NUMBERS TELLS YOU EVERYTHING

We have seen that equity investment has provided decent returns to those who have made an investment into a decent business with having decent management. I have also explained a similar concept to my articles of <u>Pat</u> <u>Dorsey</u> and <u>Kite Flying</u> regarding business + management combination. What if the business is decent, growing well but management is not interested to create a wealth of minority investors. Rather they are interested to create their personal wealth. We have seen in the past that many of the companies have put an effort to hide manipulation with financial statements so that minority investors can be misguided by those statements.

For understanding such kind of manipulation and save our hard earned money, we need to carefully check financial statements without getting impacted by words of management. Accounting is a language of business, we need to understand it well so that we can make communication with numbers.

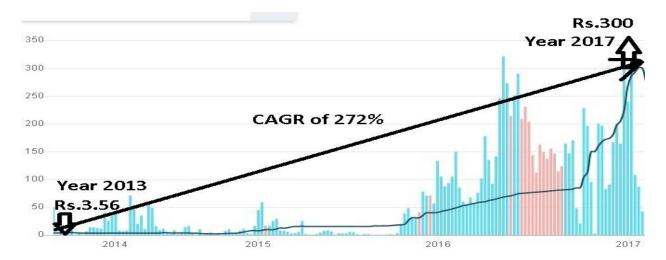

We also cannot trust big name analyst because we do not know the reason behind the recommendations given by the analyst. Recommendations can be based on genuine good company, some personal interest in the company, employer of the analyst has an agreement with the company, etc.

Many of the investors prefer to meet management to identify management quality. But personally, I am not good at judging people so that rather meet management, I prefer to check financial statements. I believe that *"Action speaks louder than words"*.

One of the company which is engaged in the trading, manufacturing, and supply of paper and paper products.

If we see CAGR till FY17 then it was 57%, 75%, 90% and 96% for the sales, Operating profits, PBT and Net profits respectively. So the market likes such hyper growth -

But we should suspects such kind of hyper growth and need to check it further in details.

We need to ask the questions that -

- If the company has posted a huge sales, profitability growth then why the company has to dilute share capital (last 2 years was due to bonus issue)?
- Company has posted +ve CFO, +ve FCF over a period of time then also why need to dilute share capital?
- Company has a higher receivables growth compared to the sales growth, why?
- Inventory conversion days are growing and reached at the 397 days which is nearly 1 year, what is happening?
- Fixed assets turnover is growing rapidly, how it can be possible? I have not seen such kind of huge turnover into the few of the asset light and also not into the IT businesses (where huge fixed assets do not have existence)

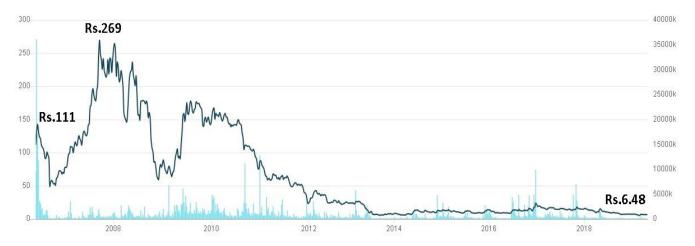

What happens after that?

There are many examples where investors have lost their capital due to not put a huge emphasis on the numbers. If we look at the numbers carefully then they talk with us and we can protect our capital by their instructions.

One of the company provides Automatic Identification and Data Capture (AIDC) Solutions, manufactures Smart cards and Radio Frequency Identification (RFID) equipment, and financial inclusion project and services.

So how to catch such manipulation? How to protect our capital? How to create wealth? How to know something is fishy into the company? I am going to discuss the different ways of accounting manipulation and how to recognize it in the future issues of the same series.

Now, we can say that analyzing the quality of management is more essential for creating wealth. If we found the company has used any of the manipulation technique in the past then also we should be careful with it. Because it is a higher probability of similar happens in the future. We cannot change our habits easily. Investing is not a game to make a higher return, it is a game to protect our capital, avoid errors. This will help us to create better wealth.

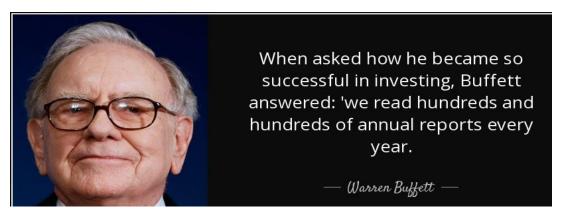

For understanding the accounting manipulation, we need to understand the financial statements so for getting the basics of financial statements. Kindly visit my posts -

- <u>SIMPLE IS BETTER ISSUE -8 OUR LIFE AND INVESTMENT 2</u>
- <u>SIMPLE IS BETTER ISSUE -9 OUR LIFE AND INVESTMENT 3</u>
- <u>SIMPLE IS BETTER ISSUE -10 RELATIONSHIP BETWEEN PROFIT & LOSS ACCOUNT AND BALANCE SHEET</u>
- SIMPLE IS BETTER ISSUE -11 CASH FLOW STATEMENT
- <u>SIMPLE IS BETTER ISSUE -12 FUND FLOW ANALYSIS</u>

There are many manipulations which are resulted through manipulating earnings. Such as Recording revenue too soon, Recording Bogus Revenue, Boosting Income Using One-Time or Unsustainable Activities, Shifting Current Expenses to a Later Period, Employing Other Techniques to Hide Expenses or Losses, Shifting Current Income to a Later Period, Shifting Future Expenses to an Earlier Period, Shifting CFO items to Investing activities, etc. We must have to understand business metrics before going for identification of Frauds. Because it may be possible that selling of land is other income for the FMCG business but core income for the real estate business.

| Rewards of the | Game |
|------------------------|--|
| Category | Rewards |
| Share-price effects | Higher share prices Reduced share-price volatility Increased corporate valuation Lower cost of equity capital Increased value of stock options |
| orrowing cost effects | Improved credit quality Higher debt rating Lower borrowing costs Less stringent financial covenants |
| onus plan effects | Increased profit-based bonuses |
| Political cost effects | Decreased regulations Avoidance of higher taxes |

We need to read annual reports with footnotes, corporate announcement, corporate deals, etc thoroughly.

Read annual reports but never trust it blindly. Because letters only sign by chairman and president but that is written by their PR fellows.

There is flexibility into the accounting policy which management of companies uses for their own benefits also.

Two companies from the Automobile Industry

Company A

Intangible assets, comprising of software, expenditure on Model fee, etc. incurred are amortised on a straight line method over a period of 5 years.

Company B

Technical know-how acquired is stated at acquisition cost less accumulated amortisation and impairment losses, if any. Acquired technical know-how is amortised equally over a period of estimated useful life i.e. six years.

Company A

| Rs Cr | Mar-15 | Mar-16 | Mar-17 | Mar-18 |
|----------------------------------|--------|--------|--------|--------|
| Depreciation % on average Assets | 16% | 11% | 10% | 11% |

Company B

| Rs Cr | Mar-15 | Mar-16 | Mar-17 | Mar-18 |
|----------------------------------|--------|--------|--------|--------|
| Depreciation % on average Assets | 10% | 13% | 15% | 16% |

We have seen that there are differences in accounting into the two companies of the same industry.

Many of the accounting practices provide a window to the companies for using it for own benefits. I will try to explain all manipulation in a simple manner into the upcoming issues of the same series.

Entire series of <u>"Numbers tells you everything"</u> is based on the books –

- Financial Shenanigans Howard Schilit
- Quality of Earnings Thornton L. O'glove
- The Financial Numbers Game Charles W. Mulford
- <u>Creative Cash Flow Reporting Charles W. Mulford</u>

I have tried to cover up concepts available with the above books. Companies mentioned in the series is just for an example purpose. I am not a SEBI registered research analyst.

To be continued.....
